

RJC-1A Clip

The RJC-1A Clip creates a quick and easy alternative to keep your insulation on the wall.

The clip, 1" wide x 3.5" long, is made from 24 gage galvanized tempered steel that helps keep the clip tight to 4mm and 5 mm [Armatherm](#) composite girts.

The "ski slope" design helps slide the clip onto the girt. This may be applied to the girt before fastening to the studs, or after the insulation is placed on the wall.

RJC-1A Clips are shipped in a 8"x8"x8" box weighing approximately 20 lbs. Each box contains 400 clips, enough to cover 1,065 square foot of wall.

"The installer tell me they are pretty simple to use. No tab/disk. no screws and no screw guns. Time well saved, and money well spent."
